SUMMARY

Informatics graduate with experience in web application development and machine learning projects. Hands-on experience from an industry internship and academic projects building practical software solutions using modern development frameworks. Interested in backend systems and data-driven applications.

SKILLS

Programming: Java, Python, Dart

Web: Vue.js, Quarkus, HTML, CSS

Database: PostgreSQL, MySQL

Tools: Git, Docker, Linux, VS Code

EXPERIENCE

Intern – Web Application Development
PLN Icon Plus | Jul 2025 – Sep 2025

- Developed an internal web application for automating official document generation using Vue.js, Quarkus, and PostgreSQL.
- Collaborated with a small development team to build and deploy the application for internal operational use.

PROJECTS

LearnHub
Platform-Based Application Development

- Developed the mobile frontend of a multi-platform learning consultation application using Flutter (Dart) as part of a five-member team.

Car Image Classification
Digital Image Processing

- Built an image-based car classification system using Python, KNN, and a Streamlit interface as part of a three-member team.

Multimodal Cyberbullying Detection
Informatics Undergraduate Final Project

- Designed and implemented a multimodal deep learning model for cyberbullying detection on social media using image and text features, emphasizing model evaluation and interpretability.

EDUCATION

Bachelor of Informatics

Telkom University | 2022 – 2026

GPA: 3.77
